

FME Hackathon

Accelerate your team's FME capability through hands-on, real-time problem solving. The FME Hackathon is a fast-paced, collaborative workshop where participants work on real data challenges using FME. Using your own datasets (or provided scenarios), you'll design, build, and refine workflows while applying best practices and expert techniques.

What You'll Learn

Apply FME to Real-World Problems. Work on live data challenges and translate business needs into practical FME workflows

Build and Improve Workflows. Design efficient, scalable workspaces using best practices for structure, performance, and reusability.

Troubleshoot and Optimise. Debug workflows, resolve issues, and improve performance using proven techniques and tools

Collaborate and Learn. Share ideas, explore different approaches, and gain insights from peers and experienced FME consultants

Workshop Format

Kick-off & Challenge Brief

Introduction to the session, datasets, and problem scenarios

Hands-On Build Sessions

Collaborative development of workflows with guidance and checkpoints

Review & Showcase

Present solutions, compare approaches, and share key learnings

Workshop Features

- Instructor-led, full-day session
- Real-world problem solving using your own data (optional)
- Collaborative, team-based environment
- Hands-on support and expert guidance

Turn your FME skills into a
Strategic Advantage
